

Movie & Product Recommendation Engine

TEAM MEMBERS:

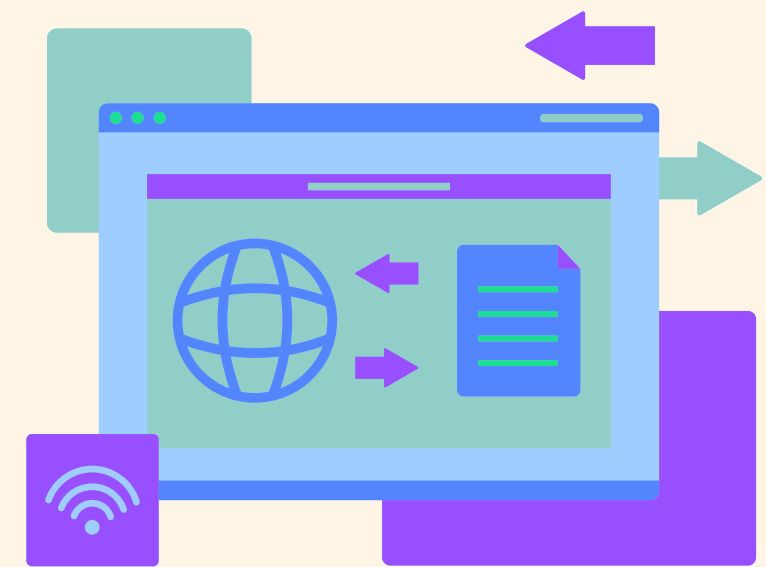

Sai Nath Reddy-2510030198

Venkata Sai Dheeraj G-2510030165

N Rishikesh Reddy- 2510030414

K Abhilash Goud-2510030298

J Akhil sagar- 2510030412

Project Introduction:

The system recommends movies and products based on user behavior instead of showing the same suggestions to everyone. It analyzes search history, watch history, purchase history, ratings, browsing behavior, similar user preferences, trending content, and previous recommendations. Core algorithms: String Similarity, Edit Distance, Hashing, Randomized Algorithms, and Parallel Processing to provide personalized, accurate, and fast recommendations.

Team Roles:

Sai Nath Reddy:

- Recommendation Score ; User Behavior Analysis

Venkata Sai Dheeraj G:

- Recommendation Ranking ; String Similarity

N Rishikesh Reddy:

- Edit Distance ; Search Suggestions

K Abhilash Goud:

- Hashing ; User Similarity ; Randomized Algorithms

J Akhil sagar:

- Similar Products ; Parallel Processing ; Recommendation History

Project Expected Output:

- Personalized movie recommendations
- Personalized product recommendations
- Recommendation score generation
- Similar movie/product suggestions
- User similarity analysis
- Smart search suggestions
- Fast recommendation processing
- Better recommendation accuracy
- Improved customer engagement
- Interactive recommendation dashboard

Project Features:

Recommendation Score:

- Gives a score to each movie or product.
- Recommends the highest-scoring items.

Similar Products:

- Suggests related movies or products.
- Helps users discover similar content.

User Similarity:

- Finds users with similar interests.
- Recommends items liked by similar users.

Search Suggestions:

- Shows suggestions while typing.
- Corrects spelling mistakes.
- Makes searching faster and easier.

Applications to Society & Real-World Impact

- **Entertainment:** Recommends movies and TV shows based on user preferences.
- **E-Commerce:** Suggests products that match customer interests.
- **Music Streaming:** Recommends songs and playlists for users.
- **Online Learning:** Suggests courses based on learning preferences.
- **Digital Marketing:** Displays personalized advertisements to users.
- **Business Analytics:** Helps businesses understand customer behavior.

System Workflow:

User Login

Collect User Data

Analyze User History (Search History, Watch History, Purchase History)

Apply Recommendation Algorithms (String Similarity, Edit Distance, Hashing, Randomized Algorithms, Parallel Processing)

Generate Recommendation Score (Calculate Personalized Score)

Find Similar Products & User Similarity (Recommend Related Items)

Display Personalized Recommendations (Movies & Products)
